Share Survivalcraft Pc Win Mediafire.rar.1. Field of the Invention This invention relates to a data processor having a plurality of data buses, which is connected to another data processor through an interface, and to a data processor system in which a plurality of data processors are connected to one another by data buses through an interface. 2. Description of the Related Art It has been proposed that one or more information processors be connected to each other to form a data processing system. FIG. 4 is a schematic view showing the configuration of a conventional data processing system. As shown in FIG. 4, a conventional data processing system includes three information processors 10a, 10b and 10c. The information processors 10a to 10c are connected to one another through a single data bus 11. Data transmission from the information processor 10a to the information processor 10c is performed by sending out a single frame of data to all the information processors 10a to 10c through the data bus 11. For example, one frame of data comprises a plurality of data words having a predetermined length. The data bus 11 is shared by the information processors 10a to 10c so as to carry out data transmission between the information processors 10a to 10c. When the data processing system is implemented, it is necessary to use a high-speed data bus which is to be connected to the information processors 10a to 10c in order to increase the speed of the system. However, since one frame of data is sent out to all the information processors 10a to 10c through the data bus 11 in the conventional system, the amount of data that can be transmitted by one data bus cycle is not so large. As a result, the data transmission speed cannot be increased. 82157476af
